

Instructions & Pairing solution

Item: G19753

Description: LED WIRELESS LIGHTING KIT 12V 4 FUNCTION

Pairing a new tail light to existing kit

1. Turn on the power on all lights.
2. Insert the plug into your vehicle, turn on the tail lights in the vehicle.
3. For the side which isnt working but has power on, Press and hold for approximately 15 seconds or more the ON button at the back of the light. This light should then pair with the plug, and the vehicle lights you are using should come on the new light
4. Check all other light functions to confirm the light is working correctly.

Pairing a new plug to existing kit

1. Similar to above instructions, Turn on the power on all lights.
2. Insert the plug into your vehicle; turn on the tail lights in the vehicle.
3. Press and hold for approximately 15 seconds or more the ON button at the back of both tail lights. The lights should then pair with the plug, and the vehicle lights you are using should turn on.
4. Check all other light functions to confirm the lights are working correctly.
